Subject: RE: Antidegradation Sampling Schedule
Attachments: QAFSP_Portsmouth Anti-deg_DRAFT sjedit DA.pdf

Hi Jeff:

I had a couple comments on the plan. I put them as notes into the PDF. Click on each one and the comment will pop up. Let me know if you have any questions or want to talk.

Thanks,

Dan

Hi Dan, here's the draft plan for Pease Antideg study for toxics for your information. It was based on a similar plan developed for the Peirce Island (PI) antideg project. I anticipate that it looks very similar to PI plan that I provided to EPA previously, with the exception of any changed standards in Env-Wq 1700 and possibly different detection limits necessary for the new "sufficiently sensitive methods" rule, although I'm not sure that that rule affects the trace metals analyses (method 1669.)

I'm hoping that I can review this before I retire but I'm running out of time!

Jeff

Hi Jeff,

Attached please find the draft QAFSP for your review.

I will discuss sampling an additional point downstream of the Newington WWTF connection to the sewer outfall with the City. There are advantages and disadvantages to this as we discussed at previous times. There is no flow measurement at a downstream location, therefore the sample would be time based. Infiltration may lead to dilution of the concentrations.

Steve

Subject: RE: Antidegradation Sampling Schedule

Hi Steve, I was waiting until I reviewed the sampling/QAQC plan for the following comments but since I may be retired before I review the draft and your planning is progressing here goes:

FYI, EPA has asked that the Newington POTW be sampled at the same time as that for the Pease WWTF. They also brought up the potential issue of the quality of the effluent from the Pease WWTF changing as well as that for the flow increase. We can discuss this, but it would seem prudent to sample effluent at three locations during the four rounds. This would include the effluent from both POTW before they mix and at a location where they are combined before the diffuser.

The sampling location for the combined waste streams would be best for the Cormix input for the existing conditions. To model the future condition there may be a need to adjust the flows and/or concentrations for pollutants in both POTW's.

Sorry for any inconvenience this may cause.

Jeff

Subject: Antidegradation Sampling Schedule

May 23, 2018

Hi Team Members,

We have selected the following dates below for our sampling program for the City of Portsmouth. Please plan the logistics around these dates. Keep in mind that we need to cancel if there is any significant rainfall prior to sampling that would interfere with our efforts.

Please send me your subcontracts if you have not done so yet.

Thanks for your patience.

Steve
